SUMMARY

Experienced FullStack Backend Software Engineer skilled in Typescript, NodeJs, Go, Express.js, AI and ML Integrations, NextJs, Go, AWS, CI/CD, Jest. Hackathon winner, conference speaker, active open-source contributor, technical content creator, with a strong industry track record.

SKILLS

Express, Solidity, Typescript, Solana, Git, Blockchain, AI, DevOps, CI/CD, AWS, RESTFul APIs, ERC20, React Js, Tailwind CSS, Jest, React Native, Figma, Expo SDK, Shadcn, Nextjs, Go, NodeJs

WORK EXPERIENCE

Sovryn

Blockchain Developer

Apr 2024 - Present

London, UK

- Led the mobile development for Entropify, a lossless derivatives platform built for decentralized finance (DeFi), offering innovative staking, lending, and borrowing solutions on blockchain networks.
- Integrated Ethereum blockchain protocols like Rust and Web3.js to enable seamless interaction with DeFi contracts, allowing users to stake, lend, and borrow digital assets in a decentralized manner.
- Designed and implemented RESTful APIs for the platform's core services, including staking, lending, and borrowing operations, while maintaining real-time data synchronization between smart contracts and the backend.
- Optimized the platform's mobile performance using TypeScript and Expo, improving app responsiveness by 25% and reducing load times.
- Deployed the application on AWS, utilizing EC2 for compute resources and RDS for database management, ensuring high availability and seamless scaling during traffic spikes.
- Collaborated with the frontend and smart contract teams to ensure smooth interaction between the platform's user interface, blockchain layer, and backend services, offering users a seamless DeFi experience.
- Employed semantic versioning to manage and track changes in the mobile application, ensuring consistent and reliable updates for users.

Definer

Solidity Developer

Sep 2023 - Apr 2024

Minneapolis, Massachusetts

- Designed and implemented backend services using TypeScript and Node.js for high-availability applications serving financial and cryptocurrency markets, ensuring robust and scalable solutions.
- Developed real-time data streaming services, processing millions of requests per day, using React Native and Expo for event-driven programming and handling asynchronous operations.
- Enhanced system performance by refactoring existing code and optimizing server-side logic, reducing latency by 20% and improving application reliability.
- Collaborated with blockchain engineers to integrate Rust-based solutions for higher transaction throughput on distributed ledger systems.
- Employed semantic versioning to manage and track changes in the codebase, ensuring consistency and clarity in the development process.
- Integrated React Navigation and Redux for robust state management and navigation within mobile applications, enhancing overall app performance and user experience.

Hexn

Blockchain Developer

Oct 2022 - Aug 2023

London, UK

- Built and maintained custom mobile applications using React Native and TypeScript, implementing clean and maintainable codebases that adhered to best practices in modern mobile development frameworks.
- Integrated third-party services (payment gateways, SMS, and email systems) into mobile applications using Expo, improving user experience and reducing system downtimes.
- Led the development of a decentralized finance (DeFi) mobile application, using Solidity for smart contract development and TypeScript for optimizing blockchain node interactions.
- Conducted code reviews and mentored junior developers, promoting best practices in React Native and TypeScript development, and fostering a culture of continuous learning.
- Worked in an Agile environment, collaborating closely with frontend developers, product managers, and stakeholders to deliver new features and ensure on-time releases, adhering to semantic versioning for consistent and reliable updates.
- Utilized Figma for designing intuitive and visually appealing user interfaces, ensuring a seamless user experience across mobile platforms.

Stellar Eminence

Jan 2021 - Feb 2022

Backend Engineer

Lagos, Nigeria

- Led the development of CustemHR, an AI-powered HR mobile application designed to streamline recruitment, onboarding, and employee performance management for enterprises, using React Native and TypeScript.
- Architected and developed the core mobile application infrastructure using React Native and Expo, ensuring scalability, performance, and reliability to support over 50,000 active users across multiple organizations.
- Designed and implemented RESTful APIs and microservices using Node.js and Express.js, ensuring seamless communication between the mobile application and backend services.
- Managed the database design and optimization for high-performance querying, working with Firebase and PostgreSQL, and ensuring data integrity and security for sensitive employee information.
- Spearheaded the adoption of CI/CD pipelines using GitHub Actions and Docker, improving deployment efficiency and reducing downtime by 40%.
- Mentored a team of developers, providing guidance on best practices for code quality, performance optimization, and architectural decisions in React Native and TypeScript.
- Enhanced the mobile application's security by implementing robust authentication and authorization methods, including JWT and OAuth2, ensuring data privacy and compliance with regulations such as GDPR.
- Collaborated with product managers and frontend teams to deliver new features on-time, including employee self-service portals, automated reporting tools, and integrations with third-party HR systems (e.g., payroll and benefits platforms).
- Led performance tuning initiatives, reducing API response times by 30% and ensuring seamless integration with the AI models for real-time data processing and feedback.

9th Technologies

Jan 2020 - Dec 2024

FullStack Developer (AI)

Nairobi, Kenya

- Developed and maintained high-performance mobile applications using React Native and TypeScript, ensuring scalability and reliability for client-facing apps with over 100,000 active users.
- Designed and implemented efficient mobile app architectures using React Native and Expo, reducing response time by 30% and improving application efficiency.
- Led the integration of blockchain features using Solidity, enabling secure transactions on a private Ethereum network for financial applications.
- Optimized mobile app performance, reducing server load by 25% by refactoring legacy code and utilizing database indexing and query optimization techniques.
- Implemented CI/CD pipelines using Jenkins and Docker for seamless deployment across staging and production environments, adhering to semantic versioning for consistent and reliable updates.

MyBizPush Solutions Limited

Jan 2025 - Present

Senior Backend Engineer

Abuja

- Developed and maintained high-performance Rest APIs using Nodejs and TypeScript, ensuring scalability and reliability for client-facing apps with over 10,000 active users.
- Implemented CI/CD pipelines using Coolify and Docker for seamless deployment across development, staging and production environments, adhering to semantic versioning for consistent and reliable updates.
- Enhanced the mobile application's security by implementing robust authentication and authorization methods, including JWT and OAuth2, ensuring data privacy and compliance with regulations such as GDPR.
- Implemented Financial API infrastructure from providers like; Paystack, Flutterwave, Interswitch, Quickteller etc

Vazzel Innovation

May 2025 - Present

Full Stack Engineer

London

- Designed and implemented efficient mobile app architectures using React and Tailwind, reducing response time by 30% and improving application efficiency.
- Consumed High performant API from the backend to ensure seamless user experience while shopping

Instict AI

Jun 2025 - Dec 2025

FullStack Engineer AI

London UK

- Built Node + TypeScript backend that serves 10k+ concurrent AI mock-interview sessions with 180ms P95 latency.
- Integrated OpenAI, Deepseek R3 via openrouter Whisper and in-house ML models via TypeORM/PostgreSQL, enabling real-time follow-ups that lifted candidate ratings 3.84.6
- Designed streaming WebSocket layer and Redis-backed job queue that cut response latency 42 % while cutting infra cost 22 %
- Shipped zero-downtime migration scripts and type-safe entity layer with TypeORM, trimming release cycle from weekly to daily

PROJECTS

CustemHR – AI-Powered HR Software

Jan 2022 - Jan 2023

Backend Developer

Lagos, Nigeria

- Developed and maintained high-performance mobile applications using React Native and Expo, ensuring scalability and reliability for client-facing apps with over 100,000 active users.
- Designed and implemented efficient mobile app architectures using React Native, reducing response time by 30% and improving application efficiency.

- Implemented CI/CD pipelines using Jenkins and Docker for seamless deployment across staging and production environments, ensuring smooth updates and rollouts.
- Collaborated with cross-functional teams to integrate backend services with React Native frontends, leveraging RESTful APIs and GraphQL for efficient data handling.

Migraide – AI-Powered Visa Application Platform

Mar 2024 - Aug 2024

Backend Developer

London, UK

- Led the development of the mobile application for Migraide, an AI-powered platform designed to help users navigate the complex process of applying for migration, study, and work visas, with a focus on high-demand visa categories like EB1 and EB2 for the United States and other countries.
- Implemented AI-driven workflows that guided users step-by-step through the application process, with automated document recommendations, visa requirement checks, and eligibility evaluations.
- Deployed the platform on AWS, utilizing EC2 instances for compute power, S3 for file storage, and RDS for database management, ensuring scalability and high availability in global markets.
- Enhanced the security of the platform by integrating OAuth2 for secure authentication and implementing encryption for sensitive personal and financial data, ensuring compliance with GDPR and other privacy regulations.
- Worked closely with frontend teams and legal experts to ensure that the platform’s user experience was intuitive and compliant with international visa application standards.
- Employed tools like React Navigation and Redux for robust state management and navigation within mobile applications, enhancing overall app performance and user experience.

Hempay

Jan 2025 - Jul 2025

Backend and DevOps

Abuja

- Collaborated with cross-functional teams to build and integrate backend services with React Native frontends, leveraging RESTful APIs and GraphQL for efficient data handling.
- Deployed the platform on AWS, utilizing EC2 instances for compute power, S3 for file storage, and RDS for database management, ensuring scalability and high availability in global markets.
- Enhanced the security of the platform by integrating OAuth2 for secure authentication and implementing encryption for sensitive personal and financial data, ensuring compliance with GDPR and other privacy regulations.

Plemuz

Jan 2025 - Jul 2025

Backend and DevOps

Abuja

- Collaborated with cross-functional teams to build and integrate backend services with Flutter mobile frontends, leveraging RESTful APIs and GraphQL for efficient data handling.
- Deployed the platform on AWS, utilizing EC2 instances for compute power, S3 for file storage, and RDS for database management, ensuring scalability and high availability in global markets.
- Enhanced the security of the platform by integrating OAuth2 for secure authentication and implementing encryption for sensitive personal and financial data, ensuring compliance with GDPR and other privacy regulations.

Yuafomi

Jan 2025 - Jul 2025

Backend and DevOps

Abuja

- Collaborated with cross-functional teams to build and integrate backend services with React Native frontends, leveraging RESTful APIs and GraphQL for efficient data handling.
- Deployed the platform on AWS, utilizing EC2 instances for compute power, S3 for file storage, and RDS for database management, ensuring scalability and high availability in global markets.
- Enhanced the security of the platform by integrating OAuth2 for secure authentication and implementing encryption for sensitive personal and financial data, ensuring compliance with GDPR and other privacy regulations.

Instict AI

Jul 2025 - Dec 2025

Fullstack Developer

London UK

- Collaborated with cross-functional teams to build and integrate backend services with React Native frontends, leveraging RESTful APIs and GraphQL for efficient data handling.
- Deployed the platform on AWS, utilizing EC2 instances for compute power, S3 for file storage, and RDS for database management, ensuring scalability and high availability in global markets.

EXTRACURRICULARS

Open Source Contributor

Sep 2023 - Present

Github

- Actively contribute to open-source projects, focusing on fullstack development and AI/ML integration. Contributed bug fixes, performance enhancements, and new features to popular repositories related to React, React Native, and Expo.
- Collaborated with global developers to improve the functionality of frontend frameworks and Artificial Intelligences, including contributing to repositories that focus on building scalable mobile UX and developing AI-driven applications.

Hackathons and Coding Competitions

Apr 2024 - Sep 2024

Hashnode, Payaza

- Regularly participate in national and international hackathons, with a focus on building AI-driven applications and fullstack solutions.
- Achieved top 10 finalist in Hackathons like #AI4Tomorrow Hackathon on Hashnode and Payaza Africa Hackathon, where I worked on projects related to DeFi applications and AI-powered software solutions.

Frontend Development Blog or Tutorials
Youtube, Medium, Blog

Sep 2024 - Present

- Regularly write technical articles on platforms like Medium, Dev.to, or your own blog, explaining frontend concepts, new tools, or tutorials in React, React Native, Expo, or TailwindCSS.
- Created in-depth tutorials on backend topics, such as "Building a Dashboard from Figma to React Code," "Introduction to Smart Contracts with Solidity," or "Using React for frontend Performance Optimization."

Tech Talks and Meetups Organization
Hello Global Conference

Feb 2024 - Feb 2024
Abuja, Nigeria

- Founded or organized a local or virtual meetup group for frontend developers, fostering collaboration and learning opportunities around technologies like Nextjs, React, and React Native.
- Hosted events or live coding sessions focused on frontend topics, such as building scalable microservices, optimizing UX experience, or writing performant code in Typescript.

Fullstack Performance Optimization Challenges
Leetcode

Nov 2024 - Nov 2024

- Participated in challenges focused on fullstack performance, such as reducing API response times, optimizing database queries, or building highly scalable frontend components using Reactt.
- Applied performance best practices in fullstack systems, contributing solutions to optimize application speed, security, and reliability.

EDUCATION

University of Nigeria
BSc. Computational Mathematics

Jan 2016 - Jan 2021
GPA: 4.3

Duke University - The Fuqua School of Business
Decentralized Finance

Jan 2022 - Mar 2024

Duke University
Cloud Machine Learning Engineering and MLOps

Mar 2023 - Apr 2023

University of California, Irvine - The Paul Merage School of Business
Blockchain

Jan 2022 - Apr 2022

CERTIFICATIONS

IBM Certified Full Stack Software Developer

The IBM Certified Full Stack Software Developer certification demonstrates proficiency in developing end-to-end web applications. Through this certification, I gained hands-on experience with both front-end and back-end technologies, including HTML5, CSS3, JavaScript, Node.js, Express, React, MongoDB, and SQL. I also developed a strong understanding of building responsive, scalable, and secure applications, leveraging cloud platforms, DevOps tools like Git, Jenkins, and Docker, and following Agile development practices. This certification solidified my ability to design and implement RESTful APIs and develop solutions that align with industry best practices for modern web development.

IBM Certified Applied AI Expert

The IBM Certified Applied AI Expert certification demonstrates advanced knowledge and skills in implementing artificial intelligence solutions using IBM's AI tools and frameworks. This certification focused on building, training, and deploying machine learning models, as well as applying AI technologies in real-world applications. I gained expertise in natural language processing (NLP), deep learning, and data analysis using tools like IBM Watson, Python, TensorFlow, and Keras. Additionally, the certification covered AI ethics, model evaluation, and practical deployment techniques, preparing me to solve complex problems with AI solutions in a business context.

Deep Learning ML Professional

The Deep Learning ML Professional certification validates my expertise in designing, training, and deploying deep learning models for a wide range of applications. Through this certification, I developed proficiency in using Python, TensorFlow, Keras, and other frameworks to build neural networks, convolutional neural networks (CNNs), recurrent neural networks (RNNs), and generative models. The certification also deepened my understanding of machine learning techniques, including supervised and unsupervised learning, as well as model optimization, hyperparameter tuning, and evaluation. This experience has equipped me with the practical skills to apply deep learning methodologies to solve complex problems across various industries, from image and speech recognition to predictive analytics.
